*Allowable Subject Matter*

1. Claims 1-7 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, Asbrink (US 5,883,574) discloses a device comprising a looped conductor portion comprised of a looped conductive wire; a shield member covering a portion of the looped conductor portion, a non-covered portion of the looped conductor portion located in a position on the looped conductive wire diametrically opposite the position where the ends of the looped conductive wire are led out of the looped conductor portion toward a reception circuit; a first line; and a second line being separated from the first line and connecting the shield member to ground. Asbrink, however, fails to specifically teach that the first line connects one end of the conductive wire to ground.

Claims 2-6 are allowed for depending on claim 1.

Regarding claim 7, none of the prior art of record fairly teaches or suggests a method of manufacturing an antenna device comprising the steps of arranging a conductive foil member around a spool member, the conductive foil member being missing at a position on a loop diametrically opposite the position where the ends of a looped conductor portion will lead out of the antenna device toward a reception circuit; winding a conductive wire as the looped conductor portion around the spool member on top of the conductive foil member; and folding the conductive foil member over the conductive wire so that the conductive wire is covered with the conductive foil member.
